

SOHO
SMALL OFFICE, HOME OFFICE
Unified Threat Management

Because having an unprotected wireless office network is a risky business.

Small Offices, Home Offices (SOHO) have a small set-up. But the Internet threats that bang at their doors are no less than those haunting large enterprises. Their problem increases as employees are connecting to the Internet not just over desktop and laptop but also over tablets, smartphones, and other handheld devices. All-in-one security against viruses, hackers, harmful Internet content and more, along with a simple to manage and affordable appliance is what Small Offices, Home Offices need today.

Questions You Must Ask

Is your office Wi-Fi network secure from unauthorized access?

Are all your Internet-access devices: computers, tablets, smartphones, and more – protected from viruses, hackers, when online?

Can you securely access network resources lying at vendor's offices or a central office?

Can you control access to Facebook, Skype, Gmail and Yahoo Messenger?

Can you monitor online activities of your employees and security of your office network?

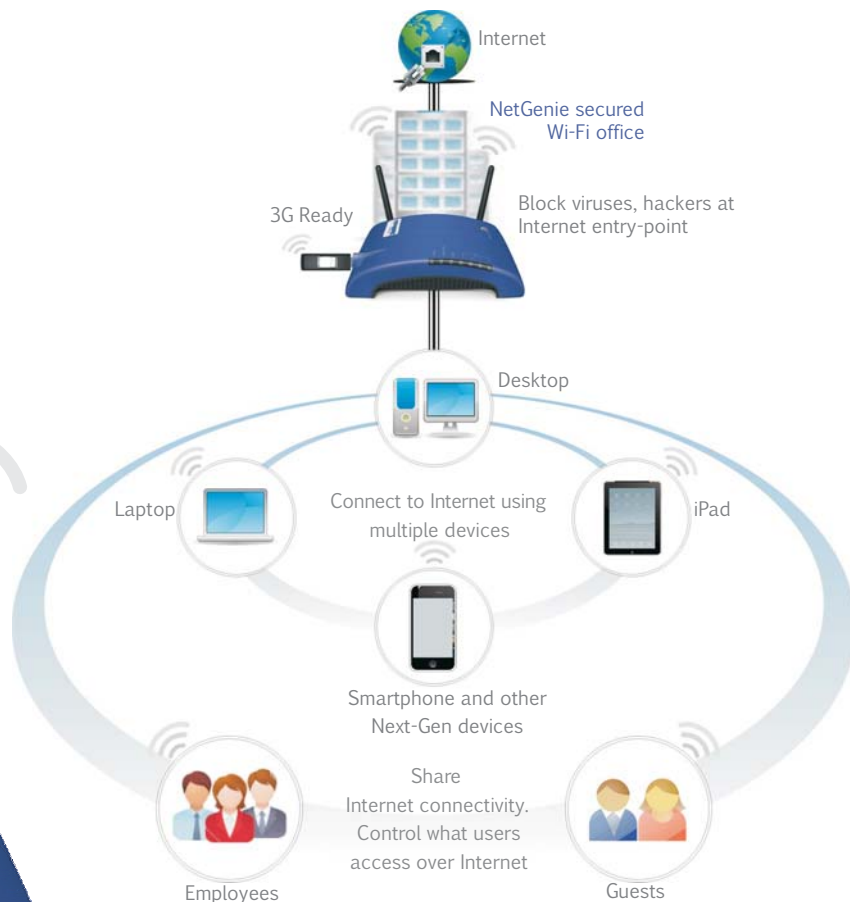

Can you share Internet connectivity of your USB broadband or 3G modem with other users at the same time?

NetGenie - Unified Threat Management for Small Office - Home Office (SOHO)

NetGenie is a Unified Threat Management appliance that offers a hack-free and virus-free Internet-surfing experience with features like Stateful Inspection Firewall, VPN (Virtual Private Network), In-built Anti-Virus, Intrusion Prevention and Internet access controls – all this in a single appliance! Placed right at the Internet entry point in your network, NetGenie secures and shares Internet connectivity across all Internet-access devices viz., desktop, laptop, PDA, smartphone, other handheld devices and more.

Get assurance of keeping out harmful and unproductive Internet content from your office network. NetGenie enables you to block adult sites, manage access to job portals, Facebook, Skype, Yahoo Messenger and more to ensure security and productivity in your office. Get real-time reports on online activities of your employees as well as on security of your network. Also, manage NetGenie settings through a web-based GUI, available over any Internet-access device within your office network!

How NetGenie Works?

SOHO

SMALL OFFICE, HOME OFFICE
Unified Threat Management

Features

Share your USB modem Internet Connection

Share Internet connectivity over your USB broadband or 3G modem with more than one user in your office at the same time by plugging in your 3G device into NetGenie appliance. NetGenie's 3G support offers back-up to your Internet connectivity – giving you uninterrupted Internet for always-on online business operations. If your office is at a location where Internet connectivity is not readily available, NetGenie's 3G support takes you online within no time.

Firewall & In-built Anti-Virus

Prevent unauthorized access into your network with NetGenie's customizable firewall with Stateful Packet Inspection and NAT capabilities, Denial of Service protection, MAC Binding and Intrusion Prevention. Protect your office network and all Internet-access devices from viruses, spyware, unwanted downloads and installation of harmful programs with NetGenie's In-built Anti-Virus security. It assures secure wireless traffic using WEP, WPA and WPA2 encryption standards.

Virtual Private Network (VPN)

Get secure access to network resources located at remote offices with NetGenie's Virtual Private Network feature. NetGenie saves time and cost to access resources lying at your vendor's office, in your corporate office, or any other location anywhere in the world – making them available to you through a secure channel.

Internet Controls

Block harmful Internet content and enhance your office productivity by managing applications and websites your employees can access. Block specific Internet activities for your employees – limit access to chat over Skype and Yahoo Messenger, social media sites like Facebook and Twitter, undesirable sites like job portals, movie downloads, and more. NetGenie offers pre-categorized list of websites and applications, taking away the inconvenience of manually putting the sites and applications you want to block.

Get all information on online activities of your employees – websites visited, online applications used, attempts to visit blocked websites and more – along with security reports like virus and intrusion attacks with NetGenie's logs and reports.

Pre-Set Wi-Fi Security

Prevent your office network from becoming an open hotspot with NetGenie's Pre-Set Wi-Fi Security settings that prevent unauthorized access and misuse of your Wi-Fi zone – offering you protection the moment you turn-on NetGenie. You don't need to manually configure complex security settings before going online.

Reports

Monitor online activities of your office users with real-time reports on websites visited, applications used and attempts made to access blocked websites and applications. Get security reports on intrusion and virus attacks in your network.

Web-based GUI

Manage NetGenie settings through a web-based GUI that can be accessed on any Internet-access device like a desktop, laptop, handheld device, from anywhere within the network, without the need to install software.
